

About PortableApps.com

PortableApps.com is the world's most popular portable software solution allowing you to take your favorite software with you. A fully open source and free platform, it works from any synced cloud folder (DropBox, Google Drive, Box, etc), from your local PC on an internal or external drive, or on any portable storage device (USB flash drive, memory card, portable hard drive, etc) moved between PCs. With millions of users all over the world and a full collection of open source and freeware software, compatible commercial software, and partners in hardware industry, PortableApps.com is the most complete solution for life on the go.

PortableApps.com was founded by John T. Haller, the developer behind numerous portable applications including "Portable Firefox" which started the portable software trend. We've been making software portable since March 2004. Today, our team stands at over 100 developers, translators, application packagers, designers and release testers with millions of users and over 880 million apps downloaded. Our goal is to centralize the knowledge and development of portable software efforts and build a single, open platform which any software or hardware developer can use.

Use PortableApps.com for your personal apps on your work PC... or for your work apps on your personal PC...

Your bookmarks and settings

Edit your documents, photos and more

FREE

No cost and no catch

No registration required

No adware, spyware, or malware

OSI Certified Open Source Software™

PortableApps.com Platform Features

The PortableApps.com Platform™ is a full-featured portable software system that lets you build your own custom portable app suite for use in your synced cloud folder, on your local PC, or on a portable USB drive.

All Your Favorite Apps, Everywhere

PortableApps.com lets you have all your favorite apps self contained to use from a synced cloud folder, on a local PC's internal or external drive, or carried on a portable device. Your browser with your bookmarks and extensions, your office suite, your photo editor, your music collection, your games, your development tools and more. Everything you need for work and play with you on every PC you use. Work, home, school, visiting family and friends, even while traveling. And everything stays in that one location, too, making it easy to install, update, and backup. Carried on a portable drive, every PC becomes your PC.

Cloud Folder, Local PC, or Portable Device. It's Your Choice

The PortableApps.com Platform comes with a smart installer that lets you easily install your environment to your cloud drive (Dropbox, Google Drive, etc), to your local PC for personal or shared use, or to your portable device. The apps are portable and will run from everywhere you work from, making it a snap to keep your apps and data with you and safely backed up to the cloud.

Portable App Directory™ - Built-In App Store and Updater

The PortableApps.com Platform has an app store built right in, so you can find and install the apps you want with just a few clicks. List all the available apps by category, title, newest releases or recently updated. You can find your favorite web browser, popular games, handy utilities, educational tools, image editors, chat programs and more. There are hundreds of free apps available with new apps added every week. With no download limit, you can download one app or one hundred.

Organize With Folders, Favorites, Type-To-Find Search and More

You can organize your growing app collection using the customizable menu so you can find the apps you need with ease. You can organize apps into folders automatically or create your own that work the way you think. Pick apps as favorites and they'll always be right at the top for instant access. You can even have the menu learn which apps you use most and keep them front and center. And when you need to find an app quickly, just type in the integrated search, and you'll find what you're looking for. When you've found your app, just hit enter and the first app

will start right up. You can also use the keyboard to navigate the app list and your search results.

PortableApps.com Updater - Your Apps Are Up To Date

With PortableApps.com, you don't need to worry about making sure your software is up to date. When a new security fix for your browser is released or a new feature in your favorite game is available, the PortableApps.com Updater will automatically let you know. Just click a button and the updates are downloaded and installed without messing up your settings and saved files. And if you're in a hurry or using a computer on a slow connection, you can wait until later with just a click.

Themes, Colors and Your Personal Menu

Whether you want your menu to look modern or retro, light or dark, glassy or simple, the PortableApps.com Platform has an option for you. With a dozen bundled themes each with a rainbow of color selections, you could pick a different look every day for months and never have the same menu twice. And you can make the menu your own by adding your own personal picture to the upper right-hand corner.

Portable Fonts

The PortableApps.com Platform supports the ability to carry fonts on your portable device and use them with your portable software without needing to install them on the local machine. Now when you're working on that important presentation for work or that poster for your charity drive, you can be as creative as you like with the look and still have it look and print the same on every computer you use. TrueType (TTF), OpenType (OTF), TrueType Collections (TTC) as well as other font formats including FON, FNT, FOT, MMM, PFB, and PFM are all supported.

Advanced Features

Whether you want to only see open source software, hide the word "Portable" in your app names, hide splash screens, automatically start apps when you start the menu, show installed apps in the app store list, get a report on all your installed apps, tweak the look and functionality of the menu or start checking out beta versions of our software, the PortableApps.com Platform has the power - and the options - to work the way you want it to. And if there's something we haven't added yet that you'd like to see, just ask in the forums. We add new features every month!
